MAFIA WEB GAME

Live Audit Report

Every step played live, with screenshots · Backend audit · Sounds

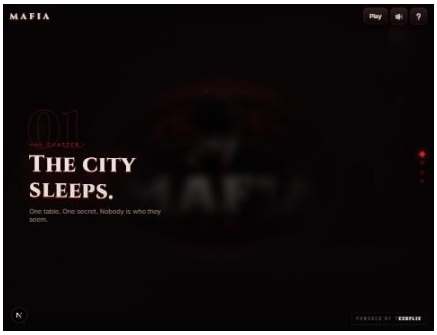

Item	Detail
Prepared by	Usman (QA + DevOps), 22 October 2026
Code tested	Live design: Mafia-Frontend + Mafia-Backend (what mafia-frontend-lyart.vercel.app runs), plus this audit's fixes
Where	Local: client http://localhost:3000, server http://localhost:4000, Browser pane
GitHub	Branch `Usman` on ahmedxali84/Mafia-Techflix- (main not touched)
Result	26 live steps passed · 82/82 automated tests · 3 backend bugs fixed · no role leaks

Every screen of the game was opened and used for real in the browser: the home page, menu, career, help, the lobby (including real network players joining and dropping), a full 7-player game with the Jester and the Thief from role reveal to victory, play again and leave. Each step shows the screenshot taken at that moment, what was done, what should happen and what actually happened.

1. Summary

Area	What was checked	Result
Menus	Home, Play page, wrong code, Career stats, How to play, mute, copy link	Pass
Lobby	Live player list, network join, 10 s drop, bots add/remove, role mix, start rules	Pass
Game	Role reveal, night picks + teammate marks, kill cinematic, morning report	Pass
Day	Town chat, Mafia channel, chat closed at night, voting, change vote, verdict	Pass
End	Victory screen, full roster, match timeline, play again, leave	Pass
Secrecy	Only own role + Mafia teammate + dead roles visible (live) and 2 full audited games (tests)	Pass
Robustness	Refresh mid-game keeps the seat; room deleted when only bots remain	Pass
Backend audit	2 room bugs that broke games + 1 hardening fix	Fixed
Sounds	Kill, vote-out, save and every button click	Pass

2. Live walkthrough: menus

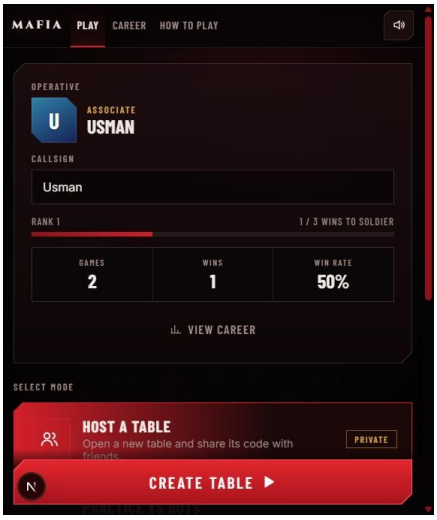

Step 1. Home page

What I did: Opened http://localhost:3000.

Expected: The "01 · Chapter I · The city sleeps" intro with the top bar (Play, sound, help) and the Powered by TECHFLIX badge.

Result: Shown exactly like the live Vercel site. The role cards fly in as you scroll (scroll-driven animation).

✔ PASS

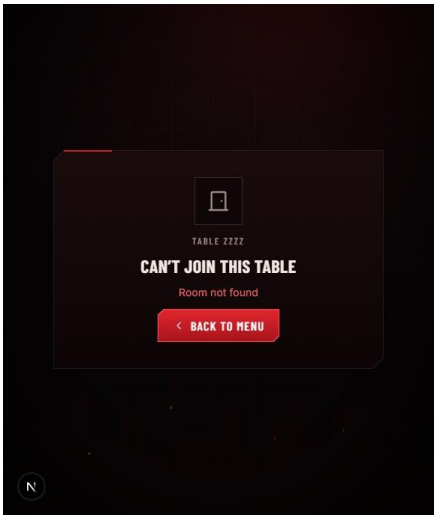

Step 2. Play page (Operative card)

What I did: Clicked **Play**. The logo zooms in, then the menu opens.

Expected: Callsign, rank and stats, plus 3 modes: Host a table, Practice vs bots, Join with code.

Result: Shows USMAN, Rank 1, 2 games / 1 win / 50% kept from earlier games. Note: the zoom only finishes while the window is visible; it froze while the Claude window was hidden and continued when it came back (browser behaviour, not a bug).

✔ PASS

Step 3. Join with a wrong code

What I did: Join with code → typed ZZZZ → Enter.

Expected: A clear error, not a crash or an empty room.

Result: "Can't join this table · Room not found" with a Back to menu button.

✔ PASS

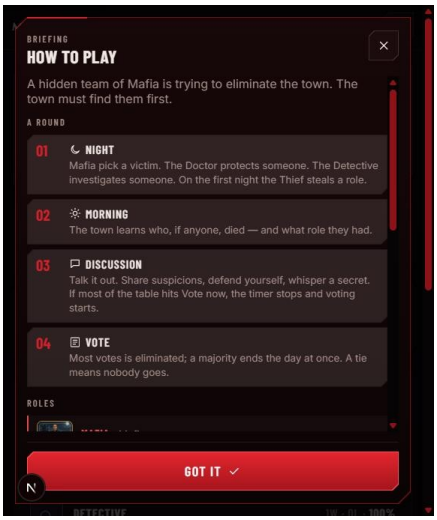

Step 4. Career page

What I did: Opened **Career** from the top menu.

Expected: Rank, wins/losses and a record per role.

Result: Associate (Rank 1), 2 games, 1 win, 1 loss, 50%, per-role record (Detective 1W, Mafia 1L).

✔ PASS

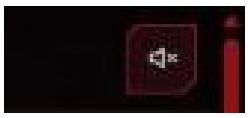

Step 5. How to play

What I did: Clicked **How to play**, then **Got it**.

Expected: Rules for each phase and role, matching the server.

Result: Night / Morning / Discussion / Vote explained, including Vote now and the Thief stealing on the first night. Matches the backend rules.

✔ PASS

Step 6. Mute button

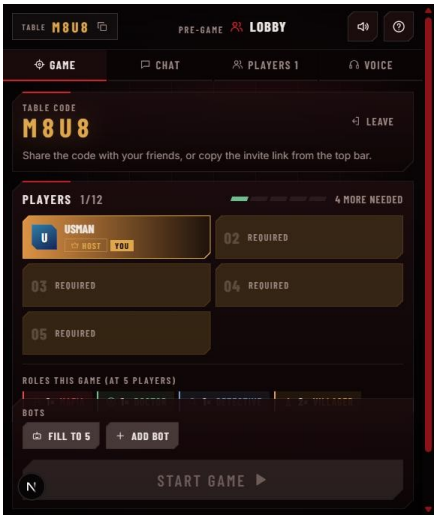

What I did: Clicked the speaker in the top bar, then again.

Expected: Sound turns off and stays off after a refresh; second click turns it back on.

Result: Label changed to "Unmute sounds" with a crossed speaker, and `mafia_muted=1` was saved. Turned back on afterwards.

✔ PASS

3. Live walkthrough: lobby

Step 7. Host a table

What I did: Host a table → **Create table**.

Expected: A 4-letter code, me as host, Start blocked until 5 players.

Result: Table M8U8, Usman HOST · YOU, 1/12, "4 more needed", Start game disabled.

✔ PASS

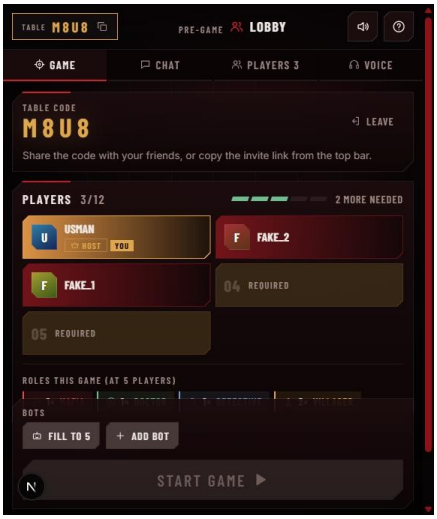

Step 8. Copy invite link

What I did: Clicked the copy icon next to the table code.

Expected: The invite link is copied and the icon confirms it.

Result: Icon turned into ✓ and the link was copied to the clipboard.

✔ PASS

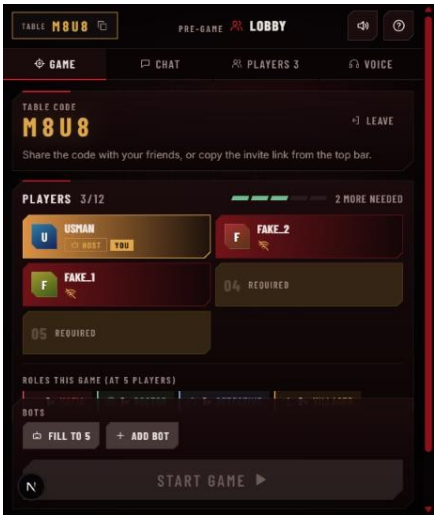

Step 9. Real players join over the network

What I did: Ran `node tests/addBots.js M8U8 2` (2 players that connect exactly like a friend's browser).

Expected: They appear in the list instantly for everyone.

Result: Fake_1 and Fake_2 joined live: 3/12, "2 more needed".

✔ PASS

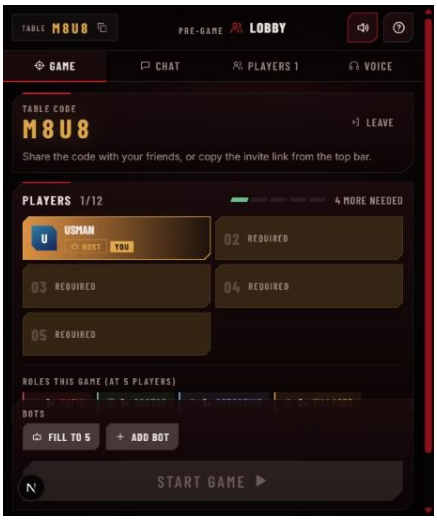

Step 10. A player drops

What I did: Closed those 2 connections.

Expected: They show as offline first (a refresh gets the seat back).

Result: Offline icon shown on both cards.

✔ PASS

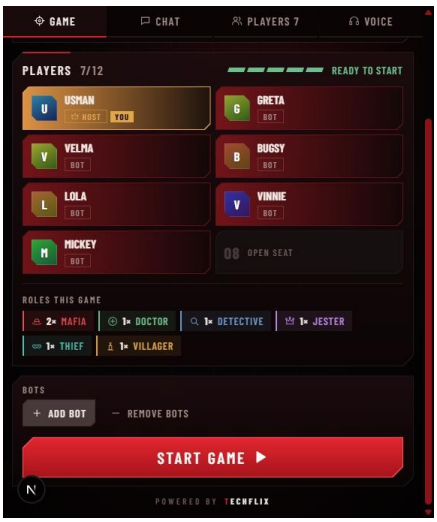

Step 11. 10-second lobby grace

What I did: Waited 10 seconds.

Expected: Players who don't come back are removed.

Result: Both removed after ~10 s; back to 1/12.

✔ PASS

Step 12. Bots and the role mix

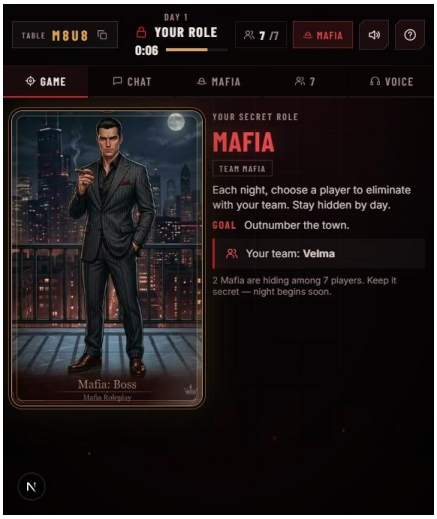

What I did: Fill to 5, **Add bot** ×2 (and tested **Remove bots** in between: back to 1/12).

Expected: At 7 players the extra roles join: Jester and Thief.

Result: 7/12 "Ready to start". Roles: 2 Mafia, Doctor, Detective, Jester, Thief, 1 Villager (matches the server rules).

✔ PASS

4. Live walkthrough: the game

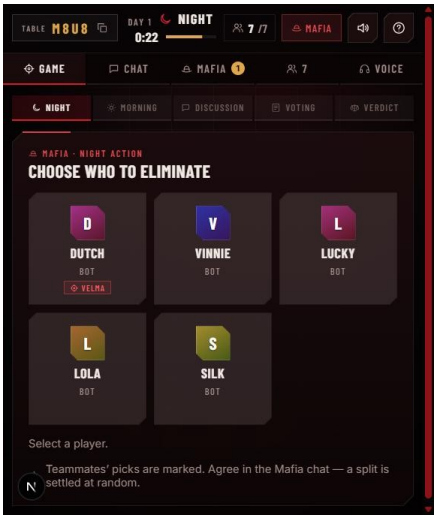

Step 13. Role reveal

What I did: Start game.

Expected: A private role card; Mafia also see their team.

Result: MAFIA card, "Your team: Velma". A separate MAFIA chat tab appeared (2 Mafia).

✔ PASS

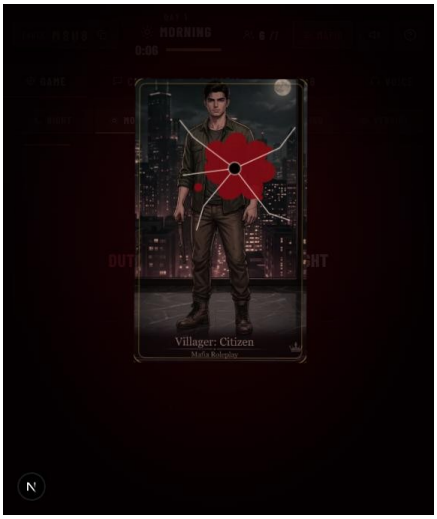

Step 14. Night: choose who to eliminate

What I did: Opened the night screen.

Expected: Only non-Mafia targets; the teammate's pick is marked.

Result: Velma (teammate) not in the list; her pick on Dutch is marked. Picked Dutch; the night ended once everyone acted.

✔ PASS

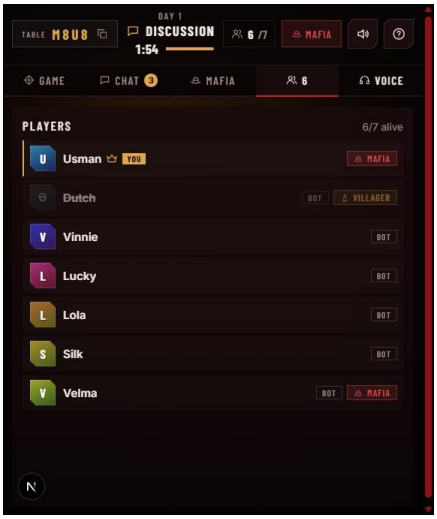

Step 15. Kill cinematic + sounds

What I did: Watched the morning.

Expected: Card shot, cracked, torn, with sounds timed to it.

Result: Bullet hole, cracks and blood on Dutch's Villager card. Sounds measured: gunshot 0.45 s, crack 0.5 s, tear 1.05 s, bell 1.2 s.

✔ PASS

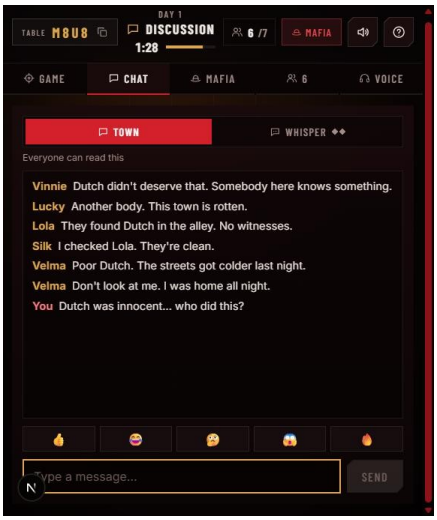

Step 16. Who can see which role

What I did: Opened the Players tab.

Expected: Only my role, my Mafia teammate and dead players' roles.

Result: Usman MAFIA, Velma MAFIA, Dutch (dead) VILLAGER; every other living role hidden. No leak.

✔ PASS

Step 17. Town chat (day)

What I did: Sent "Dutch was innocent… who did this?".

Expected: Everyone can read it; bots react.

Result: Message shown as "You" among bot reactions (Silk claimed Detective: "I checked Lola. They're clean").

✔ PASS

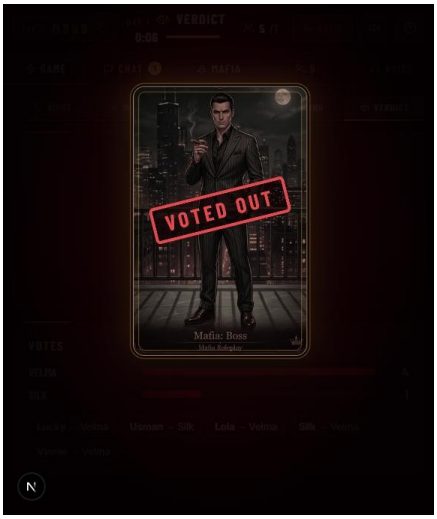

Step 18. Voting

What I did: Discussion ended (Vote now majority) → voting.

Expected: "Time to vote" with a 30 s timer and the majority needed.

Result: Splash shown, "4 decides it", Skip vote available. Voted for Silk.

✔ PASS

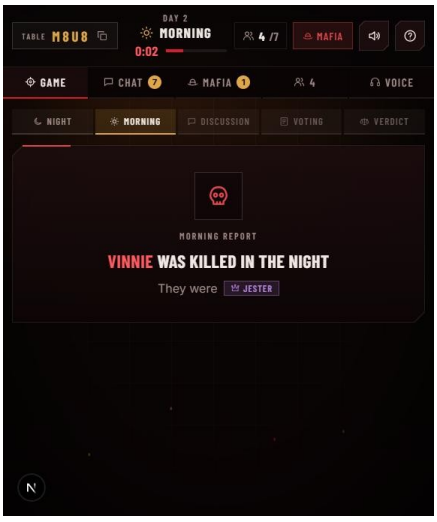

Step 19. Verdict + voted-out cinematic

What I did: Waited for the result.

Expected: The vote ends as soon as it is decided; stamp animation.

Result: Velma voted out 4–1, the full vote log is shown, "VOTED OUT" stamp (stamp, whoosh, thud sounds).

✔ **PASS**

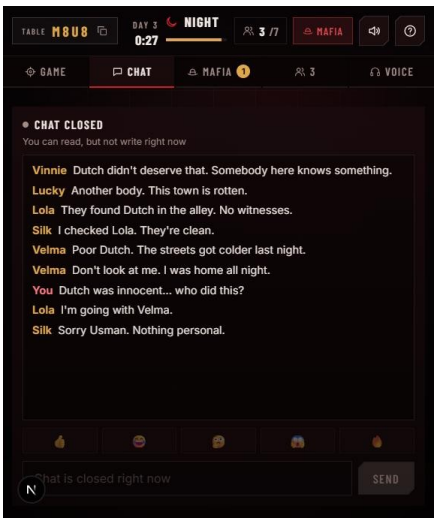

Step 20. Refresh in the middle of the game

What I did: Reloaded the page.

Expected: Same seat, same role, chat history kept.

Result: Back in Day 2 as Mafia with all messages. Morning report: "Vinnie was killed · Jester".

✔ **PASS**

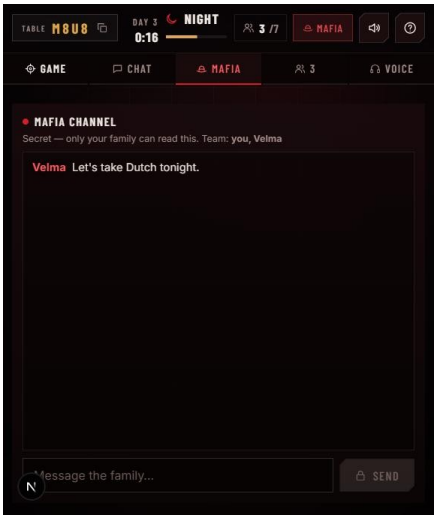

Step 21. Town chat closed at night

What I did: Opened Chat at night.

Expected: Town chat cannot be written at night.

Result: "Chat closed · You can read, but not write right now".

✔ **PASS**

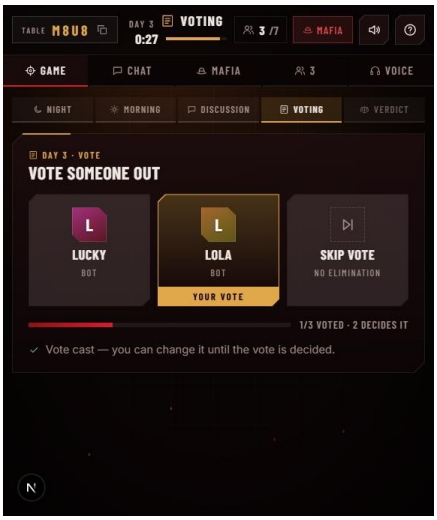

Step 22. Mafia channel

What I did: Opened the MAFIA tab.

Expected: Secret channel for the family only.

Result: "Secret — only your family can read this. Team: you, Velma", with Velma's night message.

✔ PASS

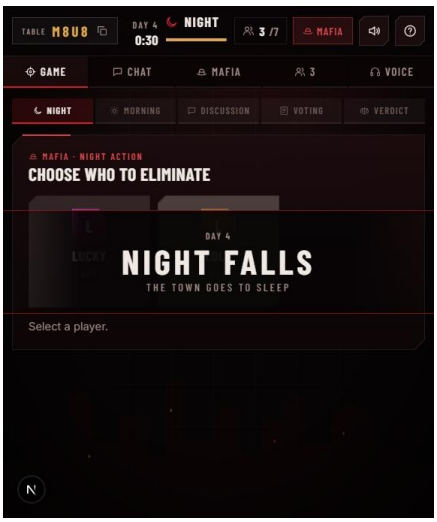

Step 23. Change your vote

What I did: Day 3 vote, then picked a different player.

Expected: A vote can be changed until it is decided.

Result: "Vote cast — you can change it until the vote is decided"; the vote ended in a tie (nobody out).

✔ PASS

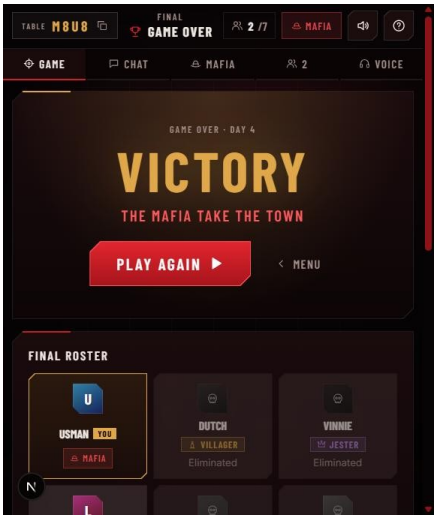

Step 24. Night falls (day 4)

What I did: Next night.

Expected: Phase splash and the night action again.

Result: "Day 4 · Night falls". Made the last kill.

✔ PASS

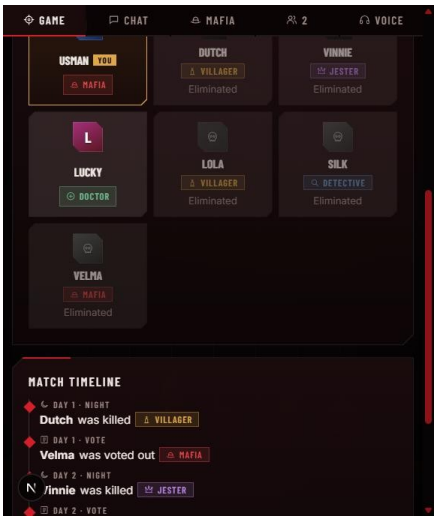

Step 25. Game over

What I did: Waited for the morning.

Expected: Mafia equal the town → Mafia win.

Result: "VICTORY · The Mafia take the town", Play again and Menu buttons.

✔ PASS

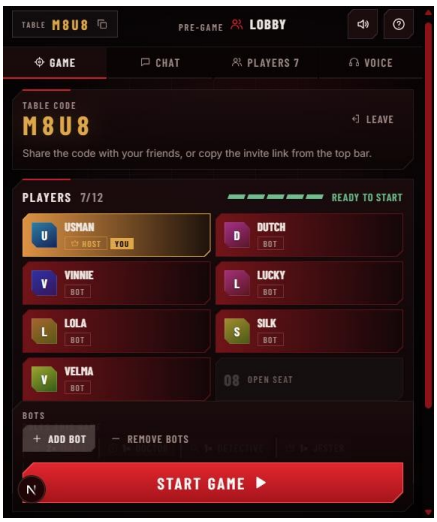

Step 26. Final roster + match timeline

What I did: Scrolled down.

Expected: All roles revealed; the story of the game.

Result: Every role shown (Doctor, Detective, Jester, Villagers, Mafia); timeline lists each kill and vote.

✔ PASS

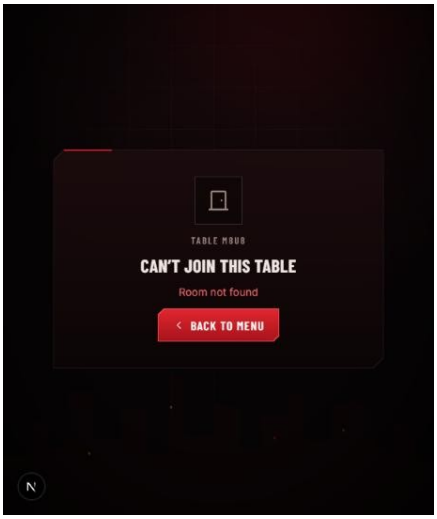

Step 27. Play again

What I did: Clicked **Play again**.

Expected: Back to the lobby with the same table.

Result: 7/12 "Ready to start", roles reset.

✔ PASS

Step 28. Leave

What I did: Leave, then opened /room/M8U8 again.

Expected: With only bots left, the room is deleted.

Result: "Can't join this table · Room not found".

✔ **PASS**

5. Automated tests

`cd server && npm test`: **82 tests, 82 pass, 0 fail**. They include the new audit tests: `timeouts.test.js`, `abandon.e2e.test.js`, and the role-leak audit for Jester + Thief.

6. Backend audit

#	Area	Finding	Severity	Status
1	Rooms	Host and a guest drop; the host comes back but the guest keeps the host title → nobody can Start / Play again / Add bot. Room stuck.	High	Fixed
2	Rooms	A player who left mid-game kept the seat after Play again and was dealt a role (seen: Mafia) on autopilot.	High	Fixed
3	Timeouts	A late cleanup timer could delete a newer room that reused the same code; rejoining didn't cancel deletion.	Low	Fixed
—	Role leaks	Every event of full games audited (classic + Jester/Thief, roles swapping mid-game). Bots only use public info.	—	Pass
—	Timeouts	Empty lobby gone after 25 s; abandoned game deleted after 5 min with timers stopped; a game whose only human leaves still finishes.	—	Pass

Not code, but important: free Render sleeps after ~15 min idle (run `node tests/checkServer.js <url>` before a demo), and games live in memory, so a restart or redeploy ends running games.

7. Sounds added

Moment	Sounds (timed to the animation)	Checked live
Night kill	Gunshot → glass crack → card tearing → death bell	0.45 / 0.5 / 1.05 / 1.2 s
Voted out	Stamp → whoosh as the card drops → thud	0.56 / 1.35 / 2.4 s
Doctor save	Shield ring + rising healing shimmer	No save happened live; same engine
Every button	Click on all buttons, tabs and menu links; no double sound	1 tone per click, measured

8. Not shown live

- **Voice chat**: the microphone is blocked inside the preview pane, so it was not tested with real audio. The app correctly shows "Microphone permission was denied". Voice routing is covered by the automated voice tests.
- **Whispers** and **ghost chat**: covered by automated tests (`whispers*.test.js`, `chat.e2e.test.js`); not repeated in this walkthrough.
- **Doctor save sound**: no save happened in these games.
